User Guide

We have all csv file, p_test.ipnb and Final_Indeed.ipnb

Download google drive collaboration. (Easier to maintains and updated data)

All raw data is saved in Data acquisition and Understanding file. Download all csv files.

If you want to get the latest data, Run p_test.ipnb (Runtime all) on google drive. Giving a new file name :

```
final_job_list.to_csv('number_of_csv_files +1 csv')
```

for example, add one new csv file. The file should named as 25 csv.

```
final_job_list.to_csv(25.csv')
```

(all file name should be greater than 24, and be continuous and uniqued)

In order to get the suggested salary, download ML modeling and Evaluation Final_Indeed.ipnb file. Run Final_Indeed.ipnb on google drive, drag all csv file on left. If user has updated the new data,

```
Code -> for i in range(1,24):
```
24 should updated to the latest number_of_csv_files, for example 25 files. for i in range(1,25):

At last of the page, enter company location, competitve company name which on the list and level of the job. [junior 1, intermediate 2, senior 3, else normal 0]

When all information is given correctly, you can get the suggested salary given.

It is only for salary suggestion. There are a lot other factors is not included. For example, the working time, vacation days, working environment and other elements.
